

What's next? QRRP survey

Automated citation scraping to generate list of researchers to survey:

- Target journals in which methods are common
- Keyword search based on these methods
- Scrape corresponding authors from citation lists
- Augment with email lists

Survey Sampling Strategy

Survey Design

- Elicit judgments from experts about methods they are familiar with but have not published on?
- Why? Bias of experts: inflated trust and confidence in scientific rigour of colleagues in own discipline.
 - Increase Expert diversity
 - Increase sample size
 - Why not? Risks eliciting incorrect judgments due to lack of proper expertise?

What's next? QRP survey

Estimating Prevalence

- % of papers or researchers? *Researchers author multiple papers, how to get a sense of impact at the level of the body of evidence / literature?*
- Self-reported engagement or impersonal estimates?

For each QRP in the survey:

"Have you ever engaged in this practice, at least once?"

**"In a sample of 1000 papers,
in how many do you expect has the QRP been undertaken?"
(Best guess, upper, lower bound)**
